

# Mohammad Arif

Product Security Engineer | MS Cybersecurity Candidate  
mohammadarif1@toromail.csudh.edu | Long Beach, CA | mohdarif.com  
<https://www.linkedin.com/in/mohd--arif/> | <https://github.com/Zero0x00>

## Summary

Product Security Engineer with 5+ years of experience securing Web, API, and cloud-native applications through application security testing, threat modelling, and security automation. Experienced in integrating security controls into CI/CD pipelines, performing secure architecture reviews, and identifying vulnerabilities in authentication, authorization, and API workflows. Strong background in AWS security, offensive security testing, and secure software development practices.

## Skills

### Application Security

Web Security, API Security, Mobile Security, Threat Modeling, Secure SDLC, Vulnerability Management, OWASP Top 10

### Cloud & DevSecOps

AWS Security, IAM, S3, VPC, CI/CD Security, SAST, DAST

### Tools

Burp Suite, Nmap, Nessus, Checkmarx, Sonatype, Prisma Cloud, Lacework

### Programming

Python, Bash, OAuth, JWT, Applied Cryptography

### Emerging Areas

AI/ML Security, Adversarial Machine Learning

## Experience

**Poshmark** Chennai  
Product Security Engineer Sept 2023 - July 2025

- Implemented security review workflows across 50+ repositories to improve secure code coverage and reduce risk exposure
- Integrated SAST, API and Mobile DAST tooling into CI/CD pipelines to automate application security testing
- Conducted Design review and threat modelling for all the new functionalities shipping for production
- Identified and remediated 20+ high and critical vulnerabilities across third-party integrations and production services
- Performed Web, API, and Mobile application security assessments, reducing remediation timelines by 80%
- Hardened AWS environments by identifying IAM, S3, and network security misconfigurations
- Partnered with engineering teams to remediate vulnerabilities and improve secure coding practices
- Developed internal automation workflows integrating Checkmarx, Sonatype, and Jira for vulnerability management
- Built hands-on security labs and CTF exercises for internal engineering security training

**Paytm** Bangalore  
Sr. Security Engineer April 2023 - Sept 2023

- Integrated application security controls into SDLC workflows and engineering release pipelines
- Conducted threat modelling and secure architecture reviews for customer-facing applications
- Performed secure code reviews and assisted developers in remediating OWASP Top 10 vulnerabilities
- Managed bug bounty program, triaged and validated 100+ valid security findings.
- Developed the Security Champion program for accelerating security culture within the organisation

**Paytm** Bangalore  
Security Engineer June 2021 - April 2023

- Performed Web, API, Mobile, and infrastructure security testing across customer-facing applications
- Reduced critical vulnerabilities by 45% through manual testing and automated security validation workflows
- Secured CI/CD deployment pipelines in collaboration with DevOps and engineering teams
- Developed remediation playbooks and vulnerability triage workflows to accelerate security fixes
- Conducted source code reviews and security assessments for application services and APIs

**Myntra** Bangalore  
Security Intern May 2020 - May 2021

- Conducted Web and API security testing across 30+ applications under senior mentorship

- Identified high-impact vulnerabilities and assisted engineering teams with remediation validation
- Built Jira dashboards and workflows for vulnerability tracking and SLA reporting

## Projects

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                |
